

DR-10 Plus Ozone Generator

How to sanitize and disinfect your home, office and work environments has become a priority for everyone. We're all hunting for a product that will clean down to a microscopic level with no elbow grease and no residue.

Using ozone gas are cost-effective, microbial sanitation devices that clean surfaces and air in the fastest and most reliable way while remaining safe for all your living environments. Ozone can reach into cracks and crevices that no elbow grease can reach and has a 99% effectiveness when killing pathogens like the flu, SARS, and coronavirus with no harsh chemical residue left behind. It's the safest treatment protecting you, your family, and your pets.

The DR-10 plus is an ozone generator with a destruct unit and ozone sensor. The DR-10 Plus comes with an ozone destruct unit (meaning any remaining Ozone left after treatment is removed and destroyed) and an HMI (Human-Machine Interface) for you to determine your ozone needs. Simply program your Dr-10 plus for the desired level of ozone and it detects when that level of ozone has been reached and it automatically destructs the remaining gas. Our unit will let you know the area is safe giving you the confidence in knowing the air is safe to consume.

This unit comes designed for all around multiple use application depending on the kill level you are trying to achieve. Parts per Million of ozone varies depending on levels and size of room being treated.

How do I know what HMI I should set up for ozone to clean a room appropriately? Designs are based on the amount of time needed to kill the pathogens based on your room size. We also provide engineering assistance to custom fit your purchase to your sanitation needs.
